

PRESS RELEASE:
MOVE OVER
INCANDESCENT LIGHT BULB

MOVE OVER INCANDESCENT LIGHT BULB

The Australian Federal Government has indicated that the incandescent lamp will be phased out and replaced by more energy efficient light sources. The Right Hon Malcolm Turnbull MP who is the Minister for the Environment said that the legislation will come into effect from 2009-2010. The Minister indicated that special needs areas, such as medical lighting and oven lamps will be taken into consideration when drafting the new legislation.

Below is an example of the usage of incandescent lamps and the highlighted area maybe targeted for replacement.

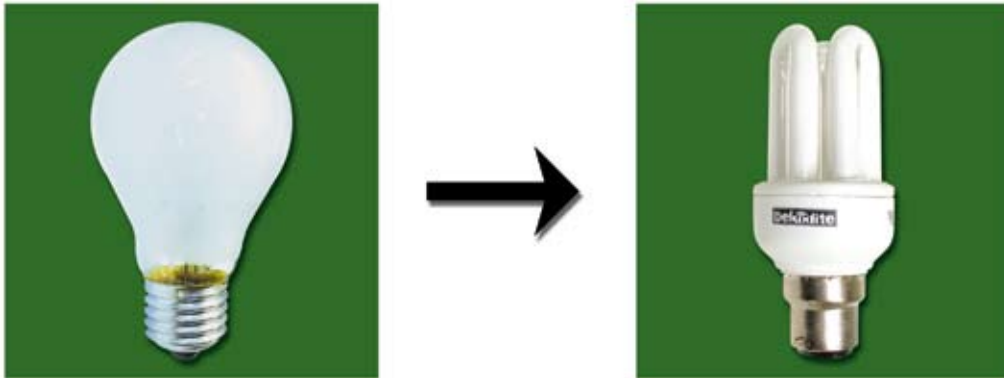

GMT Lighting supports this initiative and has over the years introduced various ranges of energy efficient lamps to our client base. The lamps range from compact fluorescent lamps, dichroic IRC and LED lighting.

At a recent Global Business forum (24 Feb 2006), Mr. Bill Clinton, former President of the United States of America, commented on the energy efficient light globes installed throughout the Langham Hotel in Melbourne.

The Langham Hotel, since 2004 has installed the Deluxlite Compact Fluorescent light bulbs throughout the Hotel, that have been supplied by GMT Lighting.

GMT Lighting through its range of Deluxlite has promoted the compact fluorescent lamp that directly replaces the incandescent range of lamps. The range consists of the different wattages, 9W, 11W, 15W and 20W with base types ES or BC in colour temperatures of warm white and daylight.

GMT is also a distributor for other major companies: Philips, GE and Osram that enables GMT to bring to the market the latest products available to help reduce the green house gas emissions.

As new lighting concepts over the next few years become available, GMT Lighting will keep our customers informed and GMT Lighting is committed to bringing innovative products to the market place.
